

TREATING IMPACTS OF AGING AND TRAUMA ON OUR QI, BLOOD AND JINYE

Tsuyoshi Shimamura Sensei

15 CEUs NCCAOM (Pending)

Tsuyoshi Shimamura's acupuncture style will change the way you view your practice. In this class he will introduce his unique method of diagnosis and treatment. He was the last apprentice to Master Nagano, a highly accomplished acupuncturist in Japan who was famous for his ingenious clinical approach. He incorporates concepts from the Chinese classical literature (Su Wen and Ling Shu), traditional Japanese acupuncture, and insights from western anatomy and physiology. Nagano Sensei's style is extremely relevant to us, the modern practitioner, and for our patients. From this foundation Shimamura Sensei has further developed Nagano Sensei's ideas, and along with influences from one of his original teachers, Kiiko Matsumoto, he is one of our generation's great acupuncturists. He will generously teach an overview of his acupuncture techniques including Master Nagano's diagnostic methods of pulse and channel/ hara palpation diagnosis and the order of treatment to build a simple, powerful treatment. He will teach constitutional treatments to nourish postnatal Qi and support prenatal Qi, treating a wide range of conditions especially suitable for mature patients and physical ailments due to injury and trauma. His method includes elegant manual techniques allowing you to use less needles and to even more powerfully assist in rehabilitating structural imbalances, visceral tension, and visceral stagnation. This seminar is the introduction to a longer-term study, which is being developed for presentation in New Mexico and Arizona in 2020 - 2022.
